Propafilm™ SNC (Tobacco)

Technical Datasheet

SNC - Low Heat-Seal Threshold Film with Shrink Tightening Properties.

Biaxially oriented polypropylene (BOPP) film co-extruded on both sides with heat-sealable polyolefinic copolymers.

Features

- Heat-sealable both sides via low seal threshold coats
- Controlled, balanced shrinkage
- Does not seal to coextruded films used in packet wrap provided recommended machine settings are used
- Good moisture and flavour barrier
- Optimised slip and anti-blocking both sides
- Strong seals for tamper evidence
- Very wide sealing range
- Technical Properties (Typical Values)

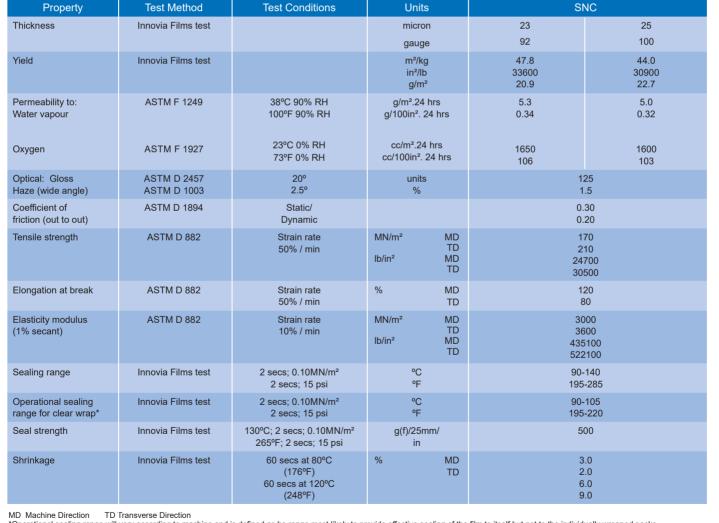

Applications

SNC are suitable for clear /naked collation of wrapped packs where exceptional pack appearance is required. Verv Low Heat-Seal Threshold. Good Hot Slip Layer

Oriented Polypropylene Blend

Very Low Heat-Seal Threshold Laver

*Operational sealing range will very according to machine and is defined as he range most likely to provide effective sealing of the film to itself but not to the individually wrapped packs. All properties are tested under standard laboratory conditions: 23 ± 2°C, 50 ± 5% RH,(73 ± 4F, 50 ± 5% RH), unless otherwise stated. Where relevant, tests are based on international testing standards

Technical Data Sheet

Reel Specifications

Nominal Reel Diameters

Film	Length (metres)		
SNC23	3300		
SNC25	3000		
Film	Length (feet)		
	10827		
SNC92	10827		

Other reel lengths are available subject to negotiation.

Outside Diameter	
For 77mm / 3in core	330mm 13in
For 153mm / 6in core	355mm 14in

Film Winding

Propafilm[™] SNC has differential hot slip properties for maximum wrap tightness. When overwrapping, it is advised to use the low slip (higher coefficient of friction) surface on the inside of the wrap, against the wrapped packs. Propafilm[™] SNC is not recommended for printing applications.

Low Slip/Treated Surface	Ordering Code	Label Symbol
Inside	I	Low slip >>
Outside	0	O Low slip <<

Film Storage and Handling

No special conditions are required for the storage of Propafilm[™] SNC but it is recommended that dry conditions at temperatures below 30°C (85°F) are employed. Propafilm[™] SNC is suitable for use for 6 months from the date of delivery and stocks should be used in rotation. Films should be allowed to reach operating room temperatures for 24 hours before use.

Food Contact

Propafilm[™] SNC complies with the applicable EU and US legislation for most applications involving direct contact with foods. Full details are given on the Declaration of Compliance. Customers intending to use Propafilm[™] SNC in a food contact application should request a copy of this document from Innovia Films. Details of compliance with food contact legislation in non-EU countries are also available upon request.
